

SYLVIA KUNAAI

AI ENGINEER | SOFTWARE ENGINEER | BLOCKCHAIN DEVELOPER

📞 +254717999188

✉️ sylviakunaa@gmail.com

📍 Nairobi, Kenya

PROFILE

AI Engineer and Software Developer with a strong foundation in building intelligent systems, data pipelines, and backend applications. Experienced in training, evaluating, and improving AI outputs with a focus on reasoning accuracy, data quality, and real-world usability. Proven ability to work independently on complex problem-solving tasks and deliver high-quality results in fast-paced environments.

TECHNICAL SKILLS

- AI/ML: Model Evaluation, Prompt Engineering, NLP, Data Annotation
- Programming: Python, JavaScript, SQL
- Data: Pandas, NumPy, Data Cleaning, ETL Pipelines
- Backend: APIs, Flask, FastAPI
- Tools: Git, Docker, Jupyter, Linux
- Other: Analytical Thinking, Technical Writing, Debugging, Research

EXPERIENCE

AI Engineer-Freelance

2025-Present

- Evaluated and improved AI-generated outputs for clarity, reasoning, and factual accuracy
- Designed prompts to test model limitations and edge cases
- Annotated datasets to enhance model performance and reduce bias
- Delivered structured feedback to improve response quality and consistency

Software Engineer – Nexus Pay

Fintech Project-2025

- Contributed to development and analysis of payment system logic
 - Worked with transaction workflows emphasizing correctness, reliability, and edge-case handling
 - Assisted in testing system behavior under different transaction scenario
-

Mobalytics Externship – Data & Product Analytics

Remote | 2024

- Worked on real-world analytical systems evaluating user and performance data
- Validated correctness of data processing logic and aggregation workflows
- Compared analytical approaches to assess efficiency, accuracy, and interpretability
- Gained hands-on experience reasoning about scalability and performance tradeoffs
- Collaborated remotely in a review-driven, production-oriented environment

System Analyst Internship -East Africa Portland System

2022

- Supported analysis and optimization of ERP systems across finance, procurement, and inventory departments
- Assisted in gathering and documenting system requirements from stakeholders
- Collaborated with cross-functional teams to troubleshoot system issues and improve performance
- Participated in system testing, validation, and user acceptance testing (UAT) processes

PROJECTS

AI Data Processing & Analytics Pipeline

- Designed ETL pipelines for cleaning and transforming structured datasets
- Built scripts to automate data validation and anomaly detection
- Improved data reliability for downstream analytics

Blockchain-Based Application

- Designed ETL pipelines for cleaning and transforming structured datasets
- Built scripts to automate data validation and anomaly detection
- Improved data reliability for downstream analytics

AI-Powered Distributor Management System (DMS)

- Designed ETL pipelines for cleaning and transforming structured datasets
- Built scripts to automate data validation and anomaly detection
- Improved data reliability for downstream analytics

EDUCATION

BSc Software Engineering

Zetech University | 2022 – 2024

Diploma in Information Technology

Zetech University | 2020 – 2022

CERTIFICATIONS

- Cisco CCNA: Enterprise Networking, Security & Automation
- CyberOps Associate
- Blockchain Specialization – Rise In
- Information Security Awareness – Cybershujaa
